

**Take charge
of your dialysis.
At home.**

**Anywhere.
Anytime.
Anyone.**

Why dialysis at home?

Tablo home dialysis patient being treated at home

Improved health benefits

Studies have shown that if you manage your own dialysis treatment, you may actually do better.

- Fewer hospital visits¹
- Better quality of life²
- Longer life expectancy³
- Ability to maintain employment⁴

Flexibility to live your life on your schedule

Free up more time for yourself and loved ones. No need to worry about travelling to and from the clinic and increasing your virus exposure risk. Be more present for cherished family moments. Fit dialysis in your life, rather than trying to live around dialysis.

You are in charge, with support at every step

Before you treat at home, you and your care partner are trained by your care team to manage your dialysis treatment from the comfort of your home. A team of trained professionals will be there for you 24/7 if you need support.

“I feel a sense of normalcy. I’m active in my church. I’m spending time with my family. It means that in spite of my kidney disease, I have my life back.”

— Tracey A, Tablo home hemodialysis patient

Tablo.

Ready to go home with you.

EASY TO LEARN

A touchscreen guides you through every step, allowing you to complete training for home use in as little as two weeks.⁵

SIMPLE SETUP

Start treatment in less than 20 minutes. Free yourself from 'snapping and tapping' with automatic air removal from tubing.

A PERFECT FIT FOR YOUR HOME

Tablo fits effortlessly into your home, with minimal tubes and wires. All you need is tap water and an electrical outlet; no batching or bags required.

CONNECTED TO YOUR HEALTHCARE TEAM

Smart sensors and wireless data transfer free you from the hassle of manual data entry. Your doctor and healthcare team will be connected to all your important treatment information online via myTablo™.

HOME, BUT NOT ALONE

Rest easy knowing that access to your Tablo care team is always just a call away and available to you 24/7.

Better begins now.
